

TG:01 II

TG:01 II

Product presentation (max 100 words)

TG:01 II, specifically designed for mixed use vehicles, provides:

Safety:

In all operating conditions, optimal lateral stability and braking performance on rough terrains and mud is guaranteed by specific tyre design, along with the self-cleaning capability.

Robustness:

High casing resistance together with a tread compound designed to avoid cut and chipping, allow extending the life-cycle and great re-treadability having a low cost per kilometer.

Comfort:

The design of TG:01 II allows having low noise emission and optimized acoustic resonance for a better acoustic comfort on asphalted roads.

Description of application (50-70 words)

For mixed use on roads, on construction sites and under aggressive surface condition. The product is suitable for asphalt roads with an excellent handling behavior, long life and for off-road usage.

Product Feature (50-70 words)

The G:01 II is the right product for all the customers that are looking for a balance between high robustness, good traction in off roads and an optimization of operating cost.

Its robust block pattern design, engineered to resist to extreme stress factors, enhances structural integrity, and high scrub resistance. Tread blocks geometry (Pirelli patent) provides an easy self-cleaning, thus ensuring better traction in mud and snow and even wear on asphalt roads.
